## Frequently Asked Questions

### What is concurrent user pricing, and what does it do mean for me?

Concurrent user pricing saves you money because you only pay for the users who actually use the system. You don't pay for users who only access

the system once in a while, and on top of that, view-only users are free! BarCloud user licensing is friendly and flexible.

### What other pricing plans do you offer other than monthly?

BarCloud Asset pricing plans include monthly, annual (pre-pay), and multi-year (pre-pay).

### What integrations are included in each pricing tier?

All pricing tiers allow for integration with QuickBooks Online, Box and Active Directory without any extra work. Additionally, all pricing tiers can set up

integrations with apps in the Zapier Zapbook via the BarCloud Open API.

### Can I also track the movement and deployment of assets/equipment in BarCloud Stock?

Equipment and assets are tracked in BarCloud Asset, the sister application. BarCloud Stock and BarCloud Asset can coexist in the same interface.
