

Security

Passport and passport App

With Passport you can rest assured that your data is completely secure. Our data center guarantees 99.99% uptime because we understand that the availability and integrity of our customers' information are vital to their business operations and our own success. We constantly monitor and improve our applications, systems, and processes to meet the growing demands and challenges of security.

99.99% Uptime Guarantee

Our hosting partner provides 99.99% uptime guarantee for Passport servers and the network.

SAS 70 Type II Certified Data Center

Our hosting partner's data centers have been certified by an independent auditor to be SAS 70 Type II compliant. SAS 70 Type II compliance represents that a service organization has been through an in-depth audit of their control objectives and control activities.

What is SAS 70 Type II Certification?

SAS 70 Type II is an internationally recognized auditing standard developed by the American Institute of Certified Public Accountants (AICPA). SAS is an acronym for “Statement of Auditing Standards.” SAS 70 Type II certification demonstrates that a data center has adequate controls and safeguards in place to host and process data related to all customer needs. It also shows that the hosting partner adheres to the control requirements introduced in the Sarbanes-Oxley Act of 2002.

Why is SAS 70 Certification Important to Your Business?

The SAS 70 audit independently verifies the validity and functionality of a data center’s control activities and processes. These control activities and processes are especially important to customers within the healthcare, insurance and financial markets, government entities, as well as publicly traded companies who must validate the security of their financial and sensitive information controls. In order to retain this certification, Professional Credit Service must submit to annual reviews performed by licensed auditors.

These audits not only verify that all procedures are in place and effective, but that they are being maintained. This annual process is one way our hosting partners demonstrate to all clients a genuine commitment to their data security needs.
